1. KIRP KAM/NKF/KFM SERIE 7 DB2

UNIT4 DataCollector is not supplied with all the components required to establish a connection with the KIRP KAM/NKF/KFM serie 7 system on DB2. The Windows workstation uses the TCP/IP protocol to establish a connection with this system. The installation of KIRP GUI software at the workstation is not required. The installation of at least IBM Data Server Client Packages Version 9.7 is required. You can find it at the following url if it is not already installed (https://www304.ibm.com/support/docview.wss?uid=swg24028317).

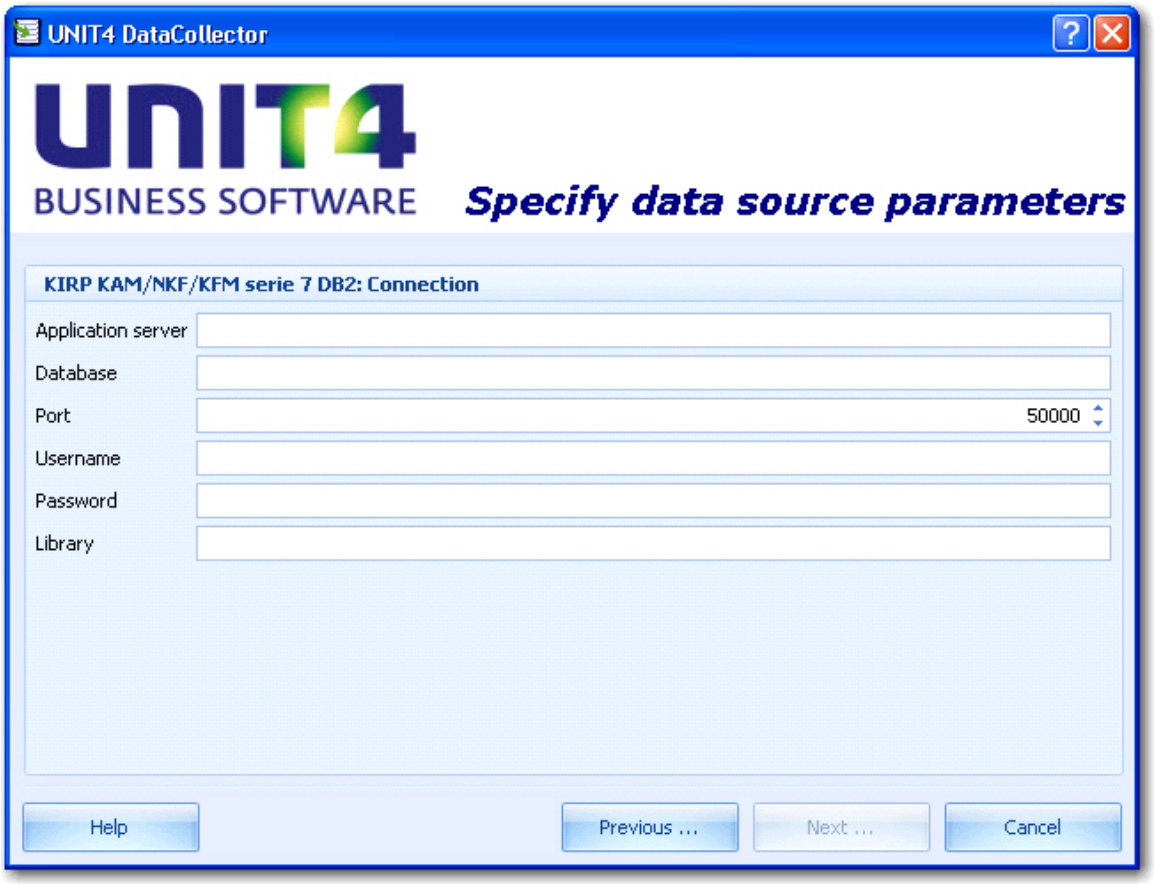

UNIT4 DataCollector only supports unicode databases.

Before specifying the file location (refer to the "Specify the file location" section of the UNIT4 DataCollector manual), perform the following steps to export data from KIRP:

- Specify the connection and login data.
- Spefify the financial year and administration.
- Select the client.
- Select the company.
- Select the entities to be exported.
- Specify the reference date.
- Select the opening balance for NKF.
- Select the creditor types for KAM.

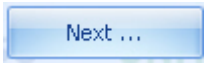

1.1. Specify the connection and login data

In this step you enter the required data to establish a connection with the KIRP KAM/NKF series 7 system on DB2.

The following data must be available for the connection and to log in:

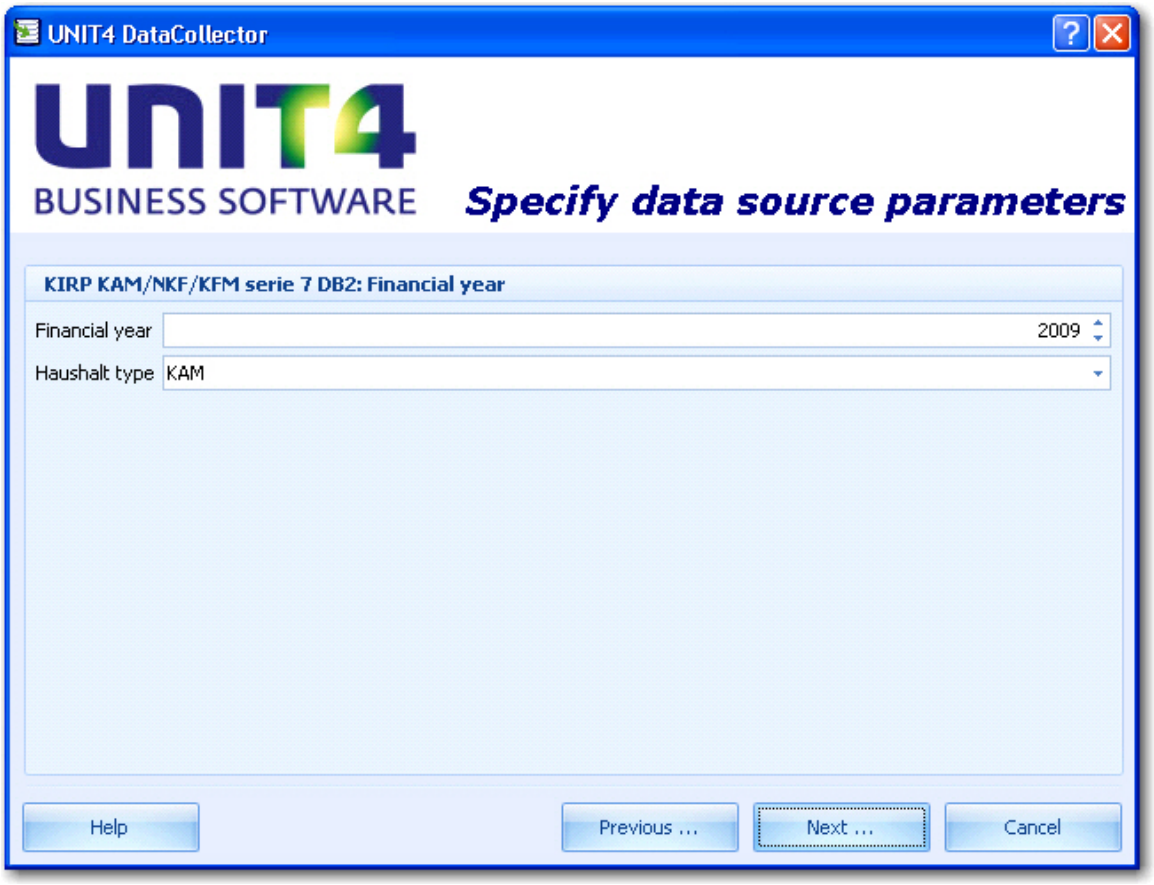

- Name or IP address of the server.
- The database name on DB2.
- Port number.
- User name.
- Password.
- Library.

Click the 

button when you have entered the data.

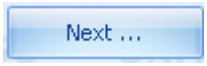

1.2. Select the financial year and administration

In this step you specify the financial year and administration from which the financial data is to be exported.

Financial year
Specify the financial year from which the financial data is to be exported. The complete financial year is exported.

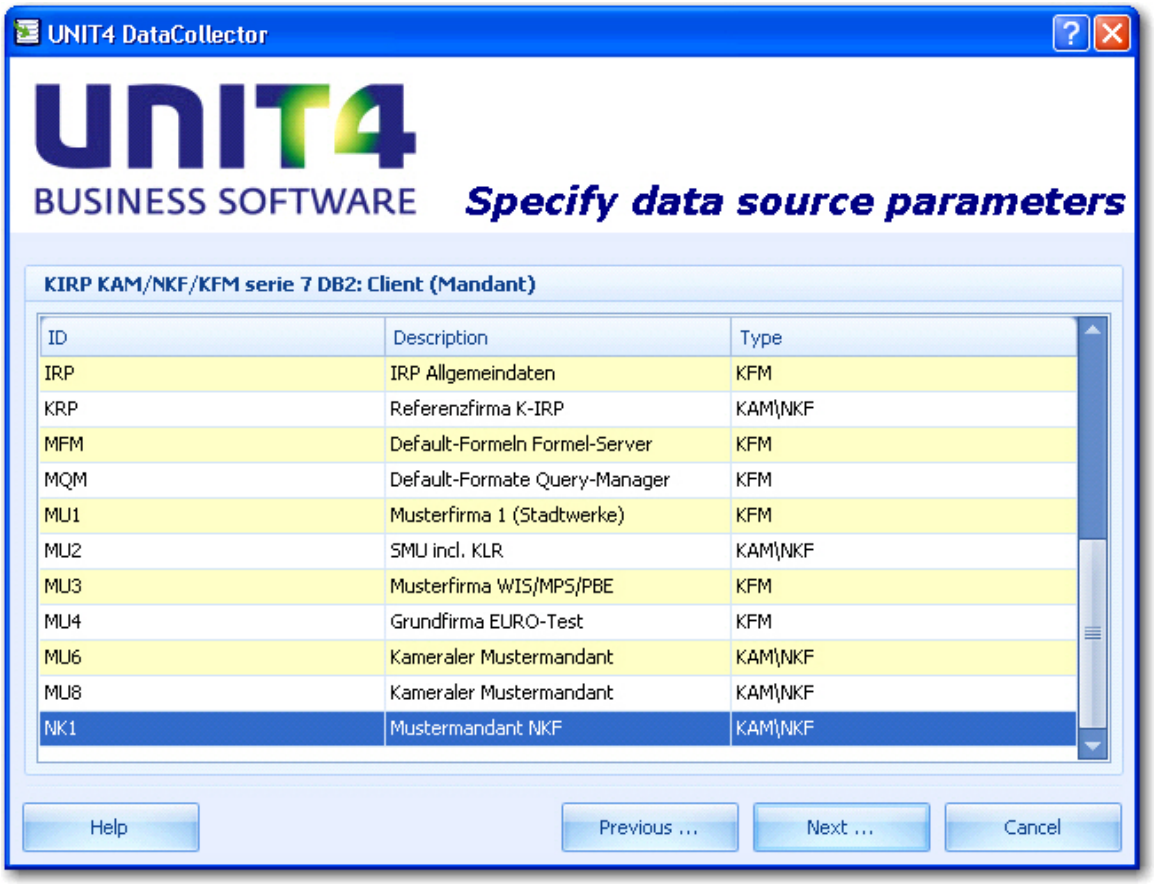

Haushalt type
select the Haushalt (administration) type you want to extract.

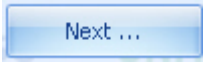

Click the 

button when you have specified the above field.

1.3. Select the client

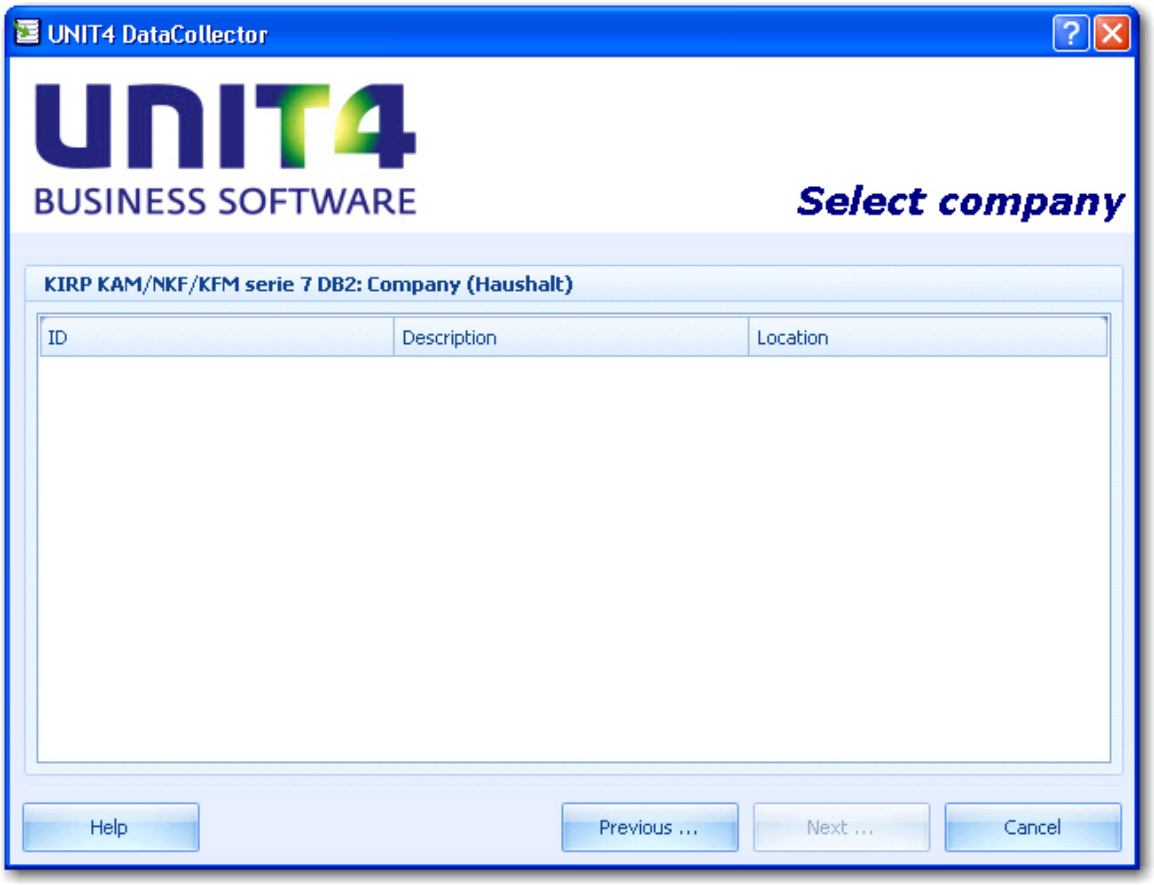

Select the client from which the data is to be exported.

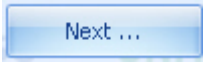

Next, click the  button.

1.4. Select the company

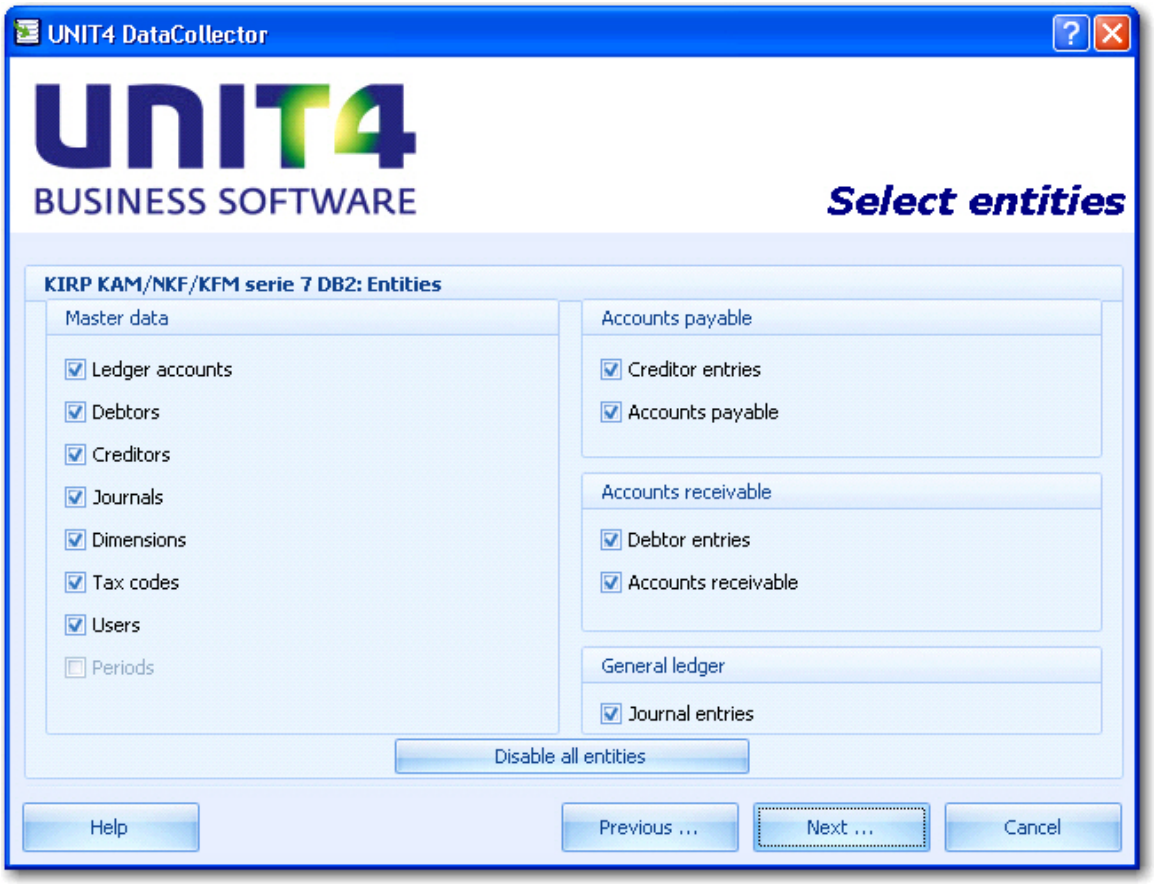

In this step you select the company from which the data is to be exported.

Next, click the  button.

1.5. Select the entities to be exported

In this step you specify the entities to be exported.

When a specific entity cannot be exported from KIRP KAM/NKF/KFM serie 7 system on DB2, this entity cannot be selected in this window (in the above image this is the "Periods" entity).

Click the 

button, to deselect the selection. You can only continue after having selected at least one entity. The 

button is now shown instead of the 

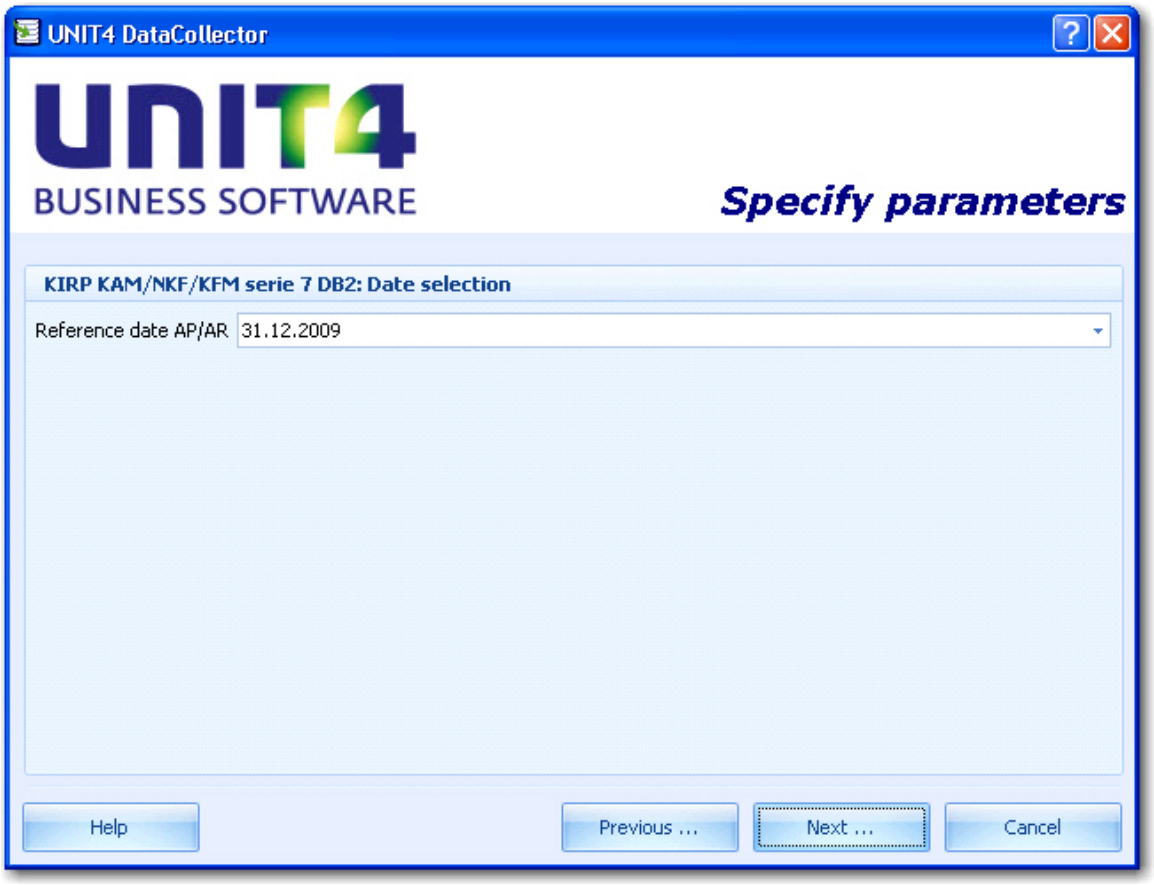

button. Click this button to select all the entities that can be exported.

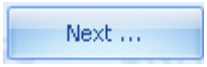

Once you have completed the selection, click the 

button.

1.6. Specify the reference date

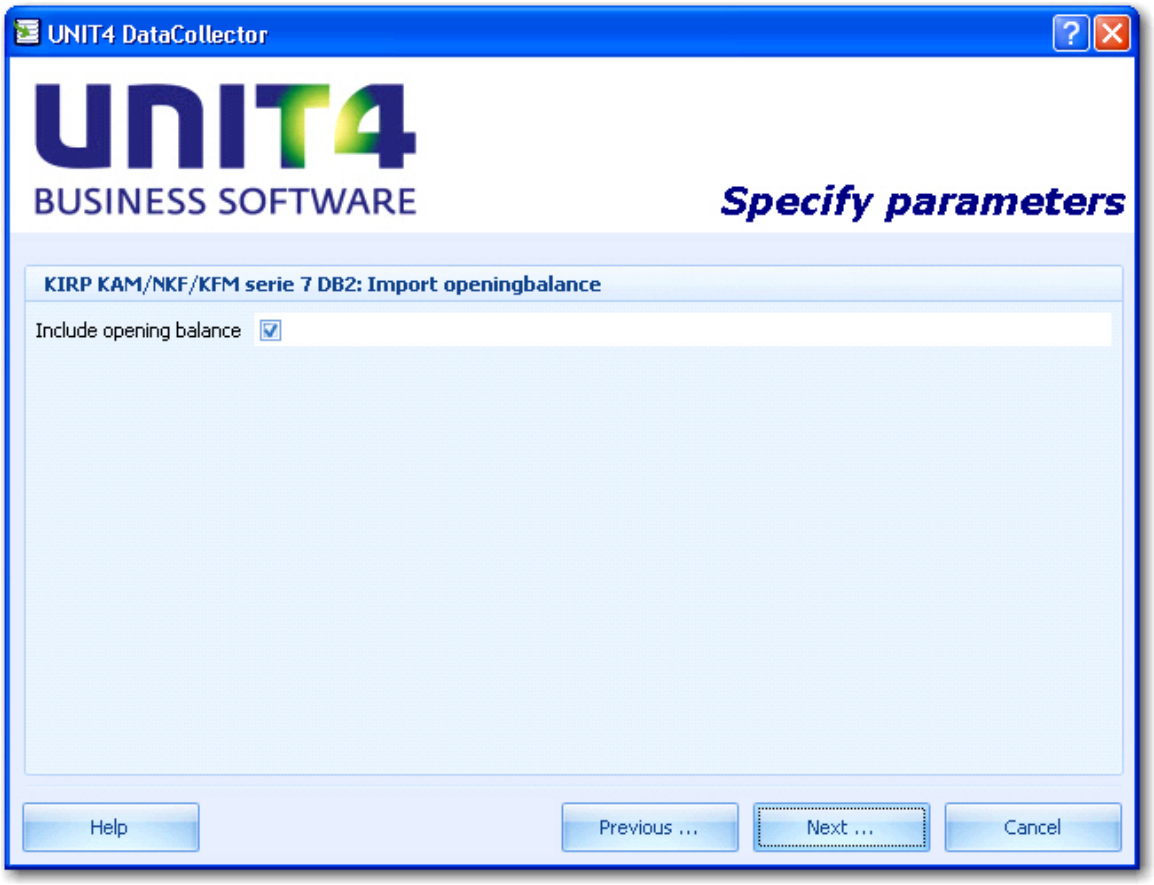

In this step you specify the reference date for the open accounts payable/accounts receivable in the **Reference date AP/AR** field.

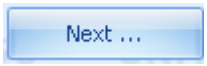

Click the  button when you have specified the above field.

1.7. Select opening balance for NKF

In this step you indicate if you want to export the opening balance of the journal entries.
You only get this step if you have choosen a NKF client.

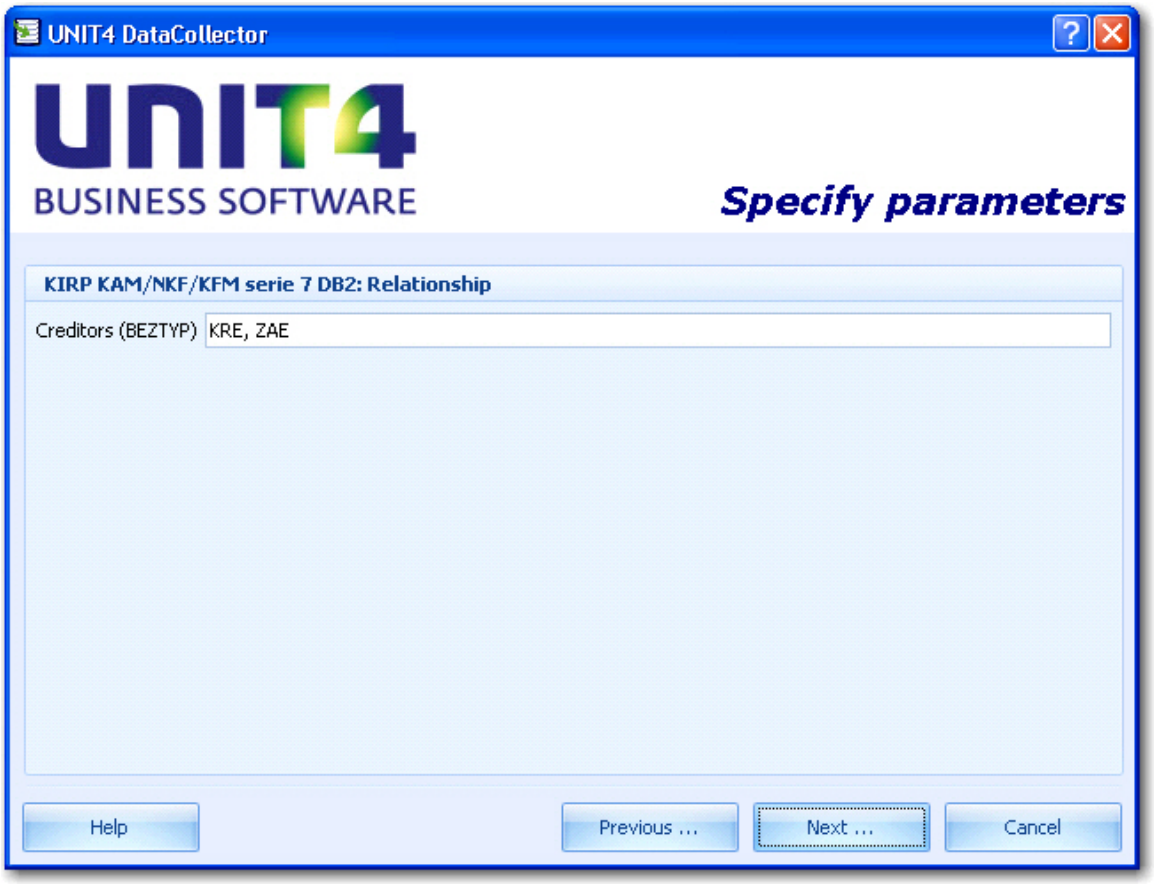

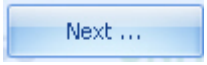

Select **Include opening balance** if you want to export the opening balance of the journal entries.

Click the  button when you have specified the above field.

1.8. Specify the creditors types for KAM

In this step you specify wich types of persons in KAM are creditors, all the others will become debtors. This is done in the **Creditors (BEZTYP)** field. You only get this step if you have choosen a KAM client.

Click the 

button when you have specified the above field.

2. DIMENSIONS

The following list shows the names of the dimensions in UNIT4 AccountAnalyser.

KIRP KAM

Dimension number	Dimension name in UNIT4 AccountAnalyser
1	Gliederung
2	Haushaltsstelle
3	Maßnahme - Einzelansicht
4	Verwahr- und Vorschuss-Unterkonten

KIRP NKF

Dimension number	Dimension name in UNIT4 AccountAnalyser
1	Produkt
2	Auftrag

3. POTENTIAL ISSUES

- Journals from KIRP NKF are filled from NKF - Vorgang. Journals from KIRP KAM are filled from Kamerale Vorgang. Journal type and contra account cannot be filled automatically from KIRP NKF and KIRP KAM. Therefore you need to fill it in your self as far as possible. This is necessary for certain reports in UNIT4 AccountAnalyser to function properly.

- From KIRP KAM journal entries in AccountAnalyser are filled in the following manner for the amounts:
  - Positive Soll amounts in KIRP KAM are debet in UNIT4 AccountAnalyser.
  - Negative Soll amounts in KIRP KAM are credit in UNIT4 AccountAnalyser.
  - Positive Ist amounts in KIRP KAM are credit in UNIT4 AccountAnalyser.
  - Negative Ist amounts in KIRP KAM are debet in UNIT4 AccountAnalyser.

- Debtor en creditor entries are selected on the Kassenjahr in KIRP KAM, this is the financial year. Open items are selected on reference date AP/AR. Some debtor en creditor entries in KIRP can be in a Kassenjahr but with an invoicedate in a later year. These invoices don't come through in the accounts payable and receivables then.

- After import from KIRP KAM or NKF the user must fill the start and end date in the financial periods him self. This can be done in UNIT4 AccountAnalyser with "Configuration | Financial periods". This is necessary for certain reports in UNIT4 AccountAnalyser to function properly.

- KIRP NKF is a double-entry bookkeeping application, and KIRP KAM is a single-entry bookkeeping application. For extractions out of KIRP KAM this has consequences for the journal entries in UNIT4 AccountAnalyser. The journal entries will not be in balance out of KIRP KAM. In period 999 therefor a balancing journal entry is made. The entry numbers in the journal entries out of KIRP KAM are not balanced. KIRP KAM also only has profit-and-loss ledger accounts. These facts have negative impact on reports in UNIT4 AccountAnalyser based on the journal entries.

- It is not possible to extract the VAT out of KIRP KAM. In the journal entries there are therefor no VAT amounts. From the VAT reports in UNIT4 AccountAnalyser only report 40015 is usable.

- The data is extracted from a whole year. Therefore, the data of the whole year (period 0 to 999) will be removed in UNIT4 AccountAnalyser before the extracted data is imported.

- Out of KIRP KAM the Invoice number is only filled with D_KASZEI in the journal entries, where as the Invoice number is filled in the debtor/creditor entries and accounts payable/receivables with D_KASZEI || D_OPNUM.

- After import from KIRP KFM the user must fill the name of the master data of the Dimensions with 0 records himself. This can be done in UNIT4 AccountAnalyser

with "Configuration | Client properties" tab **Dimensions**. This is necessary for the journal entries to show those dimension records.

- We advice to import a KIRP Haushalt from NKF into a different administration but the same client in UNIT4 AccountAnalyser when this was a KIRP Haushalt from KAM in an older year. This is because the dimension names are different between KAM and NKF.
